

**Hypothetical Class A\* Wind Turbine "Strings" with Transmission Lines on Shaded Relief**

- Class A\* Wind Turbine "Strings"
- \*connected at transmission voltage levels
- 759 miles remaining
- +— 34.5kV - 450kV Transmission Lines
- Road System
- US Interstate System
- US & State Highways
- Town Highways
- County Lines
- ▲ Selected Mountain Peaks

**Wind and Biomass Integration Scenarios in Vermont**

Prepared by Vermont Environmental Research Associates Inc.  
For Princeton Energy Resources International, LLC

January 2002

This work is sponsored by the U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, under DOE Award DE-FG01-00EE 10762, Green Mountain Power Corporation, and the Vermont Department of Public Service.

This map is part of a study to evaluate the technical and cost implications of establishing a large amount of wind and biomass power on Vermont's electric grid. The study is still in progress, with results due later in 2002.

None of the project sponsors make any claims associated with this map, implied or expressed, as to the technical or economic feasibility, or the public acceptance of siting any amount of wind energy generation in any of the locations indicated on the map
